

Mona Jadidian

Front-end Web Developer

To whom this may concern,

I am sending my resume at this time — to be considered for the vacant junior front-end. I am interested in being a Front End Web Developer within your company. My skills and qualifications fulfill the requirements for such a position. My degree in Information Communication Technology has given me the opportunity to strengthen my knowledge of front-end languages and frameworks. These include *HTML, JavaScript, CSS, Angular, and Bootstrap*. In addition, I am well-schooled in testing and de-bugging processes needed to enhance the user experience and provide client satisfaction. I bring strong problem-solving, troubleshooting and analytical skills that have helped me improve websites. My creative approach to frontend web development can be seen in my personal website — this example shows these skills.

Below are my qualifications and experiences that will prove beneficial to your company:

- Pragmatic problem solver with an ability to find solutions and self-access errors.
- Adept in responsive design and how it affects multiple platforms/devices.
- Code for me is the realization of a client's idea and delivering the concept effectively.
- My experience in learning code has enabled me to create and implement improvements in my website designs.

I would enjoy having the opportunity to discuss this potential internship further and how my skills could benefit your organization.

Yours sincerely,

Mona Jadidian.
